RESTAURANT ORDER AND KITCHEN BILLING SYSTEM

PROJECT BASED LEARNING • PROGRAMMING IN JAVA

ABSTRACT

This Java application lets a restaurant take table orders, send a clear order ticket to the kitchen, and generate the final bill with tax. It also shows which dish sells the most, giving staff a quick and accurate way to run the counter.

SYSTEM WORKFLOW

1. MENU — Menu & Order Input
2. Kitchen Ticket
3. Bill Calculation
4. Final Bill & Report

JAVA CONCEPTS USED

- Data types & operators
- Scanner class for input
- Conditional statements
- Methods
- 1D & 2D arrays

KEY FEATURES

- Displays menu with item prices
- Takes multiple orders per table
- Prints a kitchen order ticket
- Adds GST and totals the bill
- Finds the most-ordered dish

SAMPLE OUTPUT — TABLE 4, ORDER #101

Item	Qty	Price	Amount
Paneer Butter Masala	2	₹220.00	₹440.00
Veg Biryani	3	₹180.00	₹540.00
Butter Naan	6	₹40.00	₹240.00
Masala Dosa	2	₹90.00	₹180.00

Subtotal: ₹1,400.00
GST 5%: ₹70.00

Total Bill: ₹1,470.00

★ Top Dish: Veg Biryani

CONCLUSION & FUTURE SCOPE

The project applies core Java fundamentals to a real restaurant workflow. Future versions can add database storage, a touch-screen interface, online payments, and inventory tracking.
